Configuration

- Permissions
- Other Configuration Items
  - Unique behaviour for Asset Names:
  - Excel export
- Datetime formats
- Custom Field Configuration

To configure Assets and Inventory Plugin, log in to JIRA with admin privileges, and use AIP Menu > Configuration menu item. Under this page you can set permissions and other items.

Permissions

Permissions have 3 options to set:

- **All logged in users**: Any JIRA user will have the permission.
- **Users with admin role**: Any JIRA admin user will have the permission.
- **Users in defined group**: Any user in the given group name will have the permission. It is a good practice to manage permissions with a group instead of individual user access.

Below, you can find the permissions to set:

- **Access for menu permission**: Assets and Inventory Plugin Menu will be visible to the selected option
- **View Assets Report permission**: Assets Report (read only) will be accessible for the selected option
- **Manage Attributes permission**: Attribute functions including view, add, delete or update will be given to selected option
- **Manage Forms permission**: Form functions including view, add, delete or update will be given to selected option
- **Manage Assets permission**: Assets functions including view, add, delete or update will be given to selected option
- **Import and export permission**: Import and Export functions will be given to selected option. Import Scheme is a destructive operation, consider giving this permission to JIRA or Asset administrator.

Other Configuration Items

**Unique behaviour for Asset Names:**

You can choose one of the options below. It is a good practice to choose "Do Not Allow" to track the Assets easier.

- Allow same asset names
- Allow only for differen forms
- Do Not Allow

**Excel export**

You can set how you would like to see inventory field in issue navigator and excel: "Only Asset Names" or "Detailed With Attributes"
Datetime formats
Custom Field Configuration

Please see Creating asset custom fields page.
