Field has been set validator

Validates that specified field (can be a custom field) has been set.

To add Field has been set validator, go to the transition of your workflow, switch to Validators tab and click on Add Validator button.

Select JEP - Field has been set validator and click Add button.

Add Validator To Transition

Select the field which you want to be set to allow the transition.

That's it, the validator is added to the transition.

If the field has not been set but the user tried to perform the transition, below error message is displayed.
Do not forget to publish the workflow.

The field [Original Estimate] should be set in order to proceed this transition!
