User in project role validator

Validates that the logged in user has one of the specified project role(s). To add User in project role validator, go to the transition of your workflow, switch to Validators tab and click on Add Validator button.

Select [JEP - user in project role validator](#) and click Add button.

Select the project role(s) which the user should have to proceed the transition.

Click Add button, and that's it.

If the user is not in the allowed project role list of this validator, then it does not proceed the transition and gives an error message as below.
Workflow Error

Only users who are in the role [Developers, Administrators] are allowed to do this workflow transition.
It seems that you have tried to perform an illegal workflow operation.
If you think this message is wrong, please contact your JIRA administrators.

Do not forget to publish the workflow!
